Shat-R-Shield Extends T5HO Warranty To Include Lamps Used in Enclosed Fixtures

Salisbury, N.C. – June 15, 2009 – Shat-R-Shield, the leading and largest manufacturer of shatter-resistant lamps and lighting products, announces enhancements to their T5HO lamp warranty.

Following extensive research and development, Shat-R-Shield has extended its warranty to cover safety-coated T5HO lamps when used in enclosed fixtures. This inclusion matches the warranty in effect for linear T8 and T12 lamps operated in open *or* enclosed fixtures. Subject to warranty conditions, the clear and tough, skin-tight safety coating is guaranteed to last the rated-life of the lamp and will not turn yellow, crack or otherwise fail. Shat-R-Shield fully warrants fluorescent lamps based on the manufacturer's published rated-life.

Warranty conditions include: ambient temperature within an enclosed fixture must be maintained below 400°F for T5HO lamps; and ambient temperature within an enclosed fixture must be maintained below 150°F for T8 and T12 lamps.

About Shat-R-Shield

Shat-R-Shield, the original manufacturer of shatter-resistant lamps, has been ensuring lighting safety since 1976. Millions of shatter-resistant Shat-R-Shield lamps are currently on-the-job worldwide for foodservice, high-tech manufacturers, food & beverage processors, and institutions seeking the ultimate, cost-efficient worksite protection. Shat-R-Shield lamps are UL-EPH classified, NSF certified, and meet FDA, OSHA, ASME, Canadian and Mexican Government safety regulations. The company is located in Salisbury, N.C.
