

## WATER TIGHT SOCKET INSTALLATION INSTRUCTIONS

**IMPORTANT:** Product must be wired in accordance with the National Electrical Code and all applicable local codes.

**WARNING:** Make sure power is OFF prior to wiring socket.

**PRIOR TO INSTALLATION:** Determine if IP68 rating is needed. IP68 will allow the fixture to be in constant contact with water. If only IP66 is needed (for washdown and temporary exposure to water) then proceed with step 1.

**IP68 INSTALLATION:** Prior to screwing socket in place, use waterproof silicone caulk around wires at base of water tight socket. For best results use one of the following: GE Supreme Silicone, DAP Auto/Marine SealantTite or Super Glue Anchor-Tite Waterproof Epoxy. All wire connections should use water tight connectors.

**NOTE: IP68 rating is for occasional submersion in water.  
DO NOT USE COMPLETED ASSEMBLY FOR PROLONGED SUBMERSION IN WATER.**

1. Install socket at desired location prior to adding the water tight sleeve and LED lamp.

2. There are two different size silicone sleeves.  
Use the smaller diameter sleeve for the PAR30 and larger sleeve for all other lamps.

3. Fold the sleeve in half onto itself.

4. Place smooth rounded end of sleeve over the base threads of the lamp and fold the outer half of the sleeve up onto the neck of the LED.

5. Use thumbs to roll the bottom of the sleeve upwards onto the neck of the lamp so that fold is even with the base of the threads.

6. Screw the lamp into the water tight socket until snug. Do not overtighten.

7. Use thumb and index finger to grasp the outer edge of the rolled sleeve and pull down over the yellow rubber socket.  
**Hint:** Use thumb of other hand to 'hold' sleeve onto socket and work around the lamp, grasping and pulling the sleeve onto the socket. Make sure the sleeve is smooth all the way around and not folded on itself.

8. Connect AC power per electrical codes. (Black = Live; White = Neutral)

Thank you for purchasing Shat-R-Shield products.

Our goal is to supply products that have extraordinary protection for harsh environments.
